## PROFESSIONAL SUMMARY

---

Web developer with a proven track record as a freelancer since 2021, specializing in front-end and notion on back-end development. Proficient in a range of technologies including HTML, CSS, JavaScript, React, React Native, Node.js, Firebase, SQL, and Tauri.js. Experienced in building responsive web and mobile applications with a focus on user-centered design, performance optimization, and seamless functionality. Known for delivering robust solutions that align with client goals and technical requirements, while maintaining scalability and best coding practices across projects.

## WORK EXPERIENCE

---

### Freelance web developer

January 2024

Urban Security USA

Developed a Progressive Web App (PWA) to manage employee clock-in and clock-out processes, ensuring location-based compliance using geolocation services. The app restricts employees to clock in only within specified locations, enhancing accountability. The backend architecture includes a custom API built with Google Apps Script to interact with Google Sheets for data storage, allowing efficient saving, updating, and deletion of employee records. A second API was developed using Node.js and Express to connect the PWA with a PostgreSQL database, ensuring seamless data integration and secure communication. The app was built using JavaScript, HTML, CSS, React, Node.js, Express, PostgreSQL, and Google Apps Script, the app successfully reduced inefficiencies from 30% to 90% and decreased income loss by 95%, offering a highly efficient workforce management solution.

### Freelance web developer

Nov 2022

Granja M&D Santo Domingo, Dominican Republic

Developed a comprehensive web app to streamline the management of a pig farm, focused on tracking key data such as gestation periods, weight gain, and vaccination records. Built using React, JavaScript, HTML, CSS, and Firebase, the app allows for real-time data entry and monitoring, improving record accuracy and operational oversight. The solution boosted data collection efficiency to 95%, enabling more effective farm management and decision-making.

### Personal Project

March 2023

Ortografía-Básica Offline Santo Domingo, Dominican Republic

Developed an Android mobile app designed to help users improve their Spanish spelling skills. The app includes features such as Notes, Dictionary, Chat, and Exercise modules, providing a comprehensive learning experience. With the latest update, the app saw a significant increase in user acquisition from 10% to 80%, alongside a 65% reduction in user churn. Built using React, React Native, JavaScript, CSS, Firebase, and Node.js, the app offers real-time interaction and seamless data integration. Following the latest update, user acquisition increased from 10% to 80%, while user churn was reduced by 65%.
